DETAILED ACTION

1. Claims 1-32 are pending.

Election/Restrictions

2. Applicant's election with traverse of the non-elected claims, 1-10 and 21-32, in the reply filed on January 12, 2005 is acknowledged. The traversal is on the ground(s) that the various groups are obvious variants of each other. This is not found persuasive because the claim language of each Group does not mirror each other. For example, claims 1-10 require no processing units as recited from Group II, claims 11-20. As is, a reference may fully anticipate all of claims 1-10, but may not meet the claims 11-20 limitations. However, the criteria laid out in *Graham v. Deere* and a prima facie case of obviousness, does not preclude a latter applied 35 USC 103 obviousness type rejection from being invalidated from the Patent Board of Appeals, even though all the Group I claims were clearly anticipated. Similar analogy applies to the other Groups. Whether or not an obvious rejection may be properly applied is speculative. As is, Applicant's claim language would require further search/consideration for the various aspects contained within each Group. However, if Applicant concedes that each Group is not patentably distinct from each other, the Examiner may reconsider the requirement for restriction.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 11-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 11, line 16, the phrase "coverage function" is not clear as to its meaning. Page 7, lines 30 to page 8, line 8, of the descriptive portion of the specification notes that it "describes the location of parts among locations 22." Page 9, lines 20-32, also describes a coverage function, as does page 13 and Figs. 3, 6. Each description is deficient as to a technical meaning other than describing part locations. As understood, "generating a coverage function" is no more than providing a bill of lading. It is noted that a bill of lading has been notoriously old and common knowledge in the accounting aspect of part data distribution.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 11-20, as understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Brinkley et al., US 5,963,919.

Brinkley discloses a method for maintaining an optimal level of inventory, e.g. completely filled demand, a partial demand, e.g. step c, determining an optimal level of a product in inventory, e.g. 208, of inventory having a plurality of locations, e.g. 110, lead-times, e.g. cols. 3-4, L, and computing demand, e.g. 250, and generating a coverage function, e.g. a print-out of demands of replenished inventory, e.g. col. 6, lines 17-24, and determining inventory levels, e.g. 400, col. 8, lines 45-50.

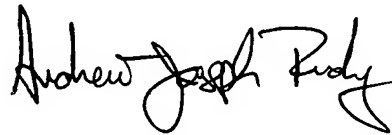

7. Further pertinent references of interest are noted on the attached PTO-892, e.g. US 5,265,006 discloses complete and partial demand.
